

RHONEPACK

STABILIZER / LUBRICANT ONEPACK

DESCRIPTION

RHONEPACK is the latest development of stabilizer/lubricant one-packs designed for multi-screw extrusion of Vinyl pipe. The high heat stability of RHONEPACK stabilizer/lubricant one-pack provides excellent early color performance with plenty of reserve for efficient use of regrind. Lubricant balance allows efficient processing on large turn screw equipment. RHONEPACK stabilizer/lubricant one-pack is available in free flowing form and is designed for better handling in automated blending equipment.

TIPYCAL PHISICAL PROPIERTIES

RHONEPACK stabilizer/lubricant one-pack refers to a family of multi-component products of slightly varying composition to meet the specific requirements of individual Vinyl pipe processors. Individual specifications are available for each product in this family. Please request this information from your technical representative.

Appearance	FREE FLOWING POWDER
Drop Point	105°–110°C
Bulk Density	515 g/l
Specific Gravity @ 25°C	1.0

APPLICATIONS AND FEATURES

- High stability, multi-functional one-pack for efficient extrusion of all types of Vinyl pipe at dosages of 2.0 to 2.4 phr
- Replaces **all** lubricants and stabilizers, including metal release additives
- Designed for "drop-in" replacement of most lead one-pack stabilizer products used in many Vinyl pipe applications
- Excellent heat stability for even the highest capacity heads and die systems used for large diameter pipe processing
- Free flowing powder are more easily handled in automated blending equipment
- Offers simplified inventory control and additive handling by reducing the number of additives and minimizing blending errors
- RHONEPACK stabilizer/lubricant one-pack consistently gives uniform compounding due to its excellent dispersion properties
- For special requirements, RHONEPACK stabilizer/lubricant one-pack is easily supplemented with lubricants and/or stabilizers as needed
